Employment History

Sharepoint Developer Intern - Cactus, Prishtina

March 2022 - June 2022

As a SharePoint Developer Intern, I actively participated in a hands-on internship program focused on developing and implementing SharePoint solutions for organizational needs. I gained practical experience in SharePoint development, customization, and administration, working closely with the development team to enhance collaboration and streamline business processes. I contributed to the development of SharePoint solutions by assisting in the design, coding, testing. I worked alongside senior developers to customize SharePoint sites and portals according to specific requirements. This involved modifying site layouts, creating document libraries, configuring security permissions, and implementing branding elements. I assisted in troubleshooting and resolving issues related to SharePoint sites, lists, and workflows. I collaborated with the team to identify and implement effective solutions. But this was only for four months because the department of 'Cloud' closed and I could not continue my learning for Sharepoint.

Software Developer - Cactus, Prishtina

July 2022

Implementation Support: I assist in the implementation of Dynamic NAV by working closely with senior team members and stakeholders to gather requirements and provide input on system configuration. I actively contribute to the project team, helping to ensure a successful transition to Dynamic NAV.

Customization Assistance: I support the customization and configuration of Dynamic NAV by following instructions and guidelines provided by senior team members. I assist in modifying forms, workflows, and reports. Troubleshooting and Support: I mostly provide troubleshooting assistance to end-users, helping to resolve issues and answer inquiries related to Dynamic NAV.

Continuous Learning: I actively engage in self-study and training opportunities to expand my understanding of Dynamic NAV and stay updated on the latest features and developments in the field.
